CMS                 :   WordPress, Shopify
UI/UX Tool          :   Figma, PSD, XD
VCS/SCM             :   Git, GitHub, Bitbucket
Site Generator      :   Jekyll
Other Frameworks    :   Laravel (Blade), .NET, Yii2, Framework7
Template Engines    :   Blade, Liquid
JS Library          :   jQuery
```

LANGUAGES & COMMUNICATION

```
Arabic    :  Working knowledge (Working with RTL mode)
English   :  Excellent in both - speaking and writing
Urdu      :  Excellent in speaking and basic in writing
Hindi     :  Excellent in - speaking
Bengali   :  Native
```

INTERESTS

CSS3 & CSS4, PostCSS (stages of Preset Env), Design (in Figma), Cooking, Poetry, History, Art & Photography

SOME OF MY WORKS

DESIGN to HTML

Incevio (Recent)

Medicust (Themeforest product)

SafeCo (Themeforest product)

Novio (Themeforest product)

Seattle Gardening (Themeforest product)

Purpose App (Themeforest product)

Findout App (Themeforest product)

DESIGN & DEVELOPMENT

HasinHayder (Practice project)(RTL ↗)

eBiz (client)(other pages↗)

Greeting Cards (client)

Black Port (Themeforest product)

Shifu (client)

Moving Companies (client)

Markaz (LTR+RTL, Arabic+Bangla)

Hi there, my name is Tanim Mahbub, it's Mahbubur Rahman Tanim in my birth certificate, and I made it short for better user experience.

I've been in the field of front-end development since mid-2015, and my primary goal initially was to establish myself as a professional front-end developer on ThemeForest. In my first 2-3 years, I exclusively worked on ThemeForest-based projects, gaining approval for more than 50 HTML templates, including some of my own creations. To this day, I continue to actively contribute to ThemeForest projects whenever the opportunity arises.

One of my passions lies in design. Since the beginning of my career, I've known a design sense at the back of my developer mind. Though not overly advanced, I draw inspiration from various sources such as demos, live links, images, and other designs. My design experiments primarily take place in Figma, but when time is an issue, I efficiently translate my ideas directly into code. Additionally, I am well-versed in using design tools like PSD, AI, XD, etc., to convert designs into HTML.

I have basic PHP knowledge and am proficient in **Laravel (Blade)**, enabling me to handle the front-end part of any Laravel project. Also, I have experience with **.Net** environment since I have worked on several projects. Furthermore, my experience extends to **WordPress** theme development and customization, ensuring that the front-end code seamlessly integrates with the back-end.

One aspect of web development that has always captivated me is CSS. Since the beginning of my learning journey, I've developed a deep appreciation for CSS, and I actively engage with the community by contributing on Stack Overflow. **My contributions on Stack Overflow**, particularly in the realm of CSS, reflect my commitment to sharing knowledge and learning from fellow web developers. I am excited about the opportunity to bring my unique blend of design and development skills to your team and contribute to the success of your projects.

Thanks & Regards - Tanim
